

Key Stage 2 Science curriculum

Science is among the mandatory subjects that must be taught at all state-funded schools during KS2. In addition to this, the National Curriculum outlines a list of topics that should be covered by teachers in science lessons.

The KS2 Science Curriculum is designed to give children the foundational knowledge required for understanding the world around them and to prepare KS2 children for their secondary education.

Our lessons will be carefully planned and delivered to allow our pupils to work scientifically by: encouraging them to be inquisitive, opportunities to plan, observe, measure, gather and record data, present findings and come to conclusions.

Lessons are to follow the guidance and be supported by the White Rose SOL.

Year ³/₄

Cycle Two

Autumn 1

Autumn 2

Spring 1

Spring 2

Summer 1

Summer 2

Topic	Food chains (2) Group and classify living things (3) Data collection A (1)	The Digestive System (5)		Sounds (5) Investigation & Consolidation (1)	States of Matter (7)	Electricity (4) Energy (1)
Cross Curricular Links			Learning Outside the Classroom			
Knowledge Pupils will ...	<ul style="list-style-type: none"> Recognise that living things can be grouped in a variety of ways. Explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment. Recognise that 	<ul style="list-style-type: none"> Describe the simple functions of the basic parts of the digestive system in humans. 		<ul style="list-style-type: none"> Identify how sounds are made, associating some of them with something vibrating. Recognise that vibrations from sounds travel through a medium to the ear Find patterns between the pitch of a sound and features of the object that produced it. 	<ul style="list-style-type: none"> Compare and group materials together, according to whether they are solids, liquids or gases. Observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius 	<ul style="list-style-type: none"> Identify common appliances that run on electricity. Construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers. Identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a

	<p>environments can change and that this can sometimes pose dangers to living things.</p> <ul style="list-style-type: none"> • Collect and present data in a range of formats. Including tables and graphs. 			<ul style="list-style-type: none"> • Find patterns between the volume of a sound and the strength of the vibrations that produced it. • Recognise that sounds get fainter as the distance from the sound source increases. 	<p>(°C).</p> <ul style="list-style-type: none"> • Identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature. 	<p>complete loop with a battery.</p> <ul style="list-style-type: none"> • Recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit. • Recognise some common conductors and insulators, and associate metals with being good conductors.
<p>Skills Pupils will ...</p>	<p>BSquared Step 7 (Age 7-9)</p> <p>Biology – Plants</p> <ul style="list-style-type: none"> • Predicts how different conditions may affect seed growth. • Explores the requirements for 	<p>BSquared Step 7 (Age 7-9)</p> <p>Biology – Animals, including Humans</p> <ul style="list-style-type: none"> • Recognises how they change through the human life cycle and that change is ongoing. 		<p>BSquared Step 7 (Age 7-9)</p> <p>Physics – Sound</p> <ul style="list-style-type: none"> • Recognises that sound can travel through air, walls, windows, etc. • Recognises that sound travels to 	<p>BSquared Step 7 (Age 7-9)</p> <p>Chemistry – States of Matter</p> <ul style="list-style-type: none"> • Measures or researches to find out the temperature materials change shape. 	<p>BSquared Step 7 (Age 7-9)</p> <p>Physics – Electricity</p> <ul style="list-style-type: none"> • Explains the function of a switch in a circuit. • Describes the difference between an electrical

	<p>life and growth for different types of plants.</p> <ul style="list-style-type: none"> •Explains simply why seeds need to be dispersed. •Looks for patterns in colours or textures of flowers when discussing how the seeds are dispersed. •Classifies plants into broad groups using observable features, •Names, locates and describes the main parts of a plant involved in transporting water and nutrients. •Relates the terms "pollen" and 	<ul style="list-style-type: none"> •Identifies physical differences between females and males. •Names and labels the organs which are protected by different parts of the skeleton, e.g. ribs. •Identifies, names and labels the different teeth in humans and their functions, e.g. canine, incisor <p>Simply describes the process of food digestion using given vocabulary.</p> <ul style="list-style-type: none"> •Understands the simple functions of the basic parts of the human digestive system, 		<p>the ears from its source.</p> <ul style="list-style-type: none"> •Describes the difference in vibrations made when a loud or soft noise is heard. •Recognises that sound travels to our ears. •Uses the idea that sounds are associated with vibrations, and that they require a medium to travel through, to explain how sounds are made and heard. •Describes the relationship between the pitch of a sound and the features of its source; and between the 	<ul style="list-style-type: none"> •Describes how some common materials can change state. •Explores different objects to test if they are solid, liquid or gas. •Classes changes to water as a reversible change. •Explains the different stages of the water cycle. •Describes how water can keep on changing between states. •Describes the characteristics of different states of matter and groups materials on this basis; and 	<p>conductor and insulator, giving examples.</p> <ul style="list-style-type: none"> •Identifies what makes a complete electrical circuit. •Checks components in the circuits one-by-one to find a problem. •Recognises a circuit must have a power source, which is part of a complete loop, to work. •Draws their circuit using pictorial representation.
--	---	---	--	--	---	--

	<p>"pollination" to plant life cycles.</p> <ul style="list-style-type: none"> •Relates the term "photosynthesis" to plant nutrients and growth. •Describes and labels a flowering plant, giving an explanation of the functions of the main parts, e.g. flower, leaves, root. •Observes and makes detailed drawings of parts of a flower, labelling different parts. <p>Biology – Living Things and their Habitats</p> <ul style="list-style-type: none"> •Describes the requirements of 	<p>e.g. saliva, small intestine.</p> <ul style="list-style-type: none"> •Names and describes the functions of the main parts of the digestive system. 		<p>volume of a sound, the strength of the vibrations and the distance from its source.</p>	<p>describes how materials change state at different temperatures, using this to explain everyday phenomena, including the water cycle.</p>	
--	---	--	--	--	---	--

	<p>plants for life and growth.</p> <ul style="list-style-type: none">•Explains how environmental changes may have an impact on living things.•Suggests why all living things are closely dependent on their environment.•Describes life cycles in some plants and animals simply, including reproduction.•Identifies the main stages of the human life cycle.•Raises and answers questions about local living things and their habitats, e.g. by					
--	--	--	--	--	--	--

	<p>exploring their local environment at different stages throughout the school year.</p> <ul style="list-style-type: none">•Explores the dependency between animals and habitats and predicts what might happen if something changes.•Creates a simple classification key to name, identify and group living things.•Names, identifies and groups a variety of living things using classification keys.•Groups living things in a variety of different ways.

Skills- Working Scientifically

Pupils will...

Working Scientifically (BSquared Step 7 Age 7-9)

- Includes scientific language appropriate to the topic correctly when communicating their ideas and findings.
 - Draws simple conclusions based on their findings.
 - Compares scientific information from different sources.
 - Collates and organises scientific information.
 - Discusses information gathered on a data logger.
- Interprets and presents discrete and continuous data using appropriate graphical methods, including bar charts and time graphs.
 - Creates graphs and charts to record information they have gathered.
 - Takes careful measurements using standard units.
 - Records information they have found through research.
 - Extracts and combines information from more than one given source.
 - Classifies using a range of simple methods, e.g. Venn diagram, lists.
- Observes closely using a magnifying glass or microscope to help give a detailed view or answer to a scientific question.
 - Predicts using prior knowledge, e.g. what might happen to a heated material.
 - Identifies how to control the variables in a simple test.

	<ul style="list-style-type: none"> •Suggests a variable that could be tested, e.g. to find the best growing conditions for a seed. •Plans a practical enquiry to test their idea after discussion with a member of staff. •Makes notes of ideas, theories and questions they have. 					
Key vocabulary	<ul style="list-style-type: none"> • Vertebrate – an animal with a spine. • Invertebrate – an animal without a spine. • Exoskeleton – a type of skeleton on the outside of an animal's body that provides support and protection. • Insect – an invertebrate that has three body sections, six legs and two antennae. 	<ul style="list-style-type: none"> • Teeth – the hard structures in the mouth used to bite and chew through food. • Carnivore – an animal that eats other animals. • Herbivore – an animal that eats plants • omnivore – an animal that eats other animals and plants. • Teeth – the hard structures in the mouth used to bite and chew through food. 		<ul style="list-style-type: none"> • Vibration – a quick back-and-forth movement. • Ear – an organ in humans (and many other animals) that detects vibrations, allowing hearing. • Sound – vibrations that travel through the air, or another medium, and are heard when they reach an ear. • Volume – how loud or quiet a sound is. 	<ul style="list-style-type: none"> • Solid – a state of matter with a fixed shape and a fixed volume. • Liquid – a state of matter with no fixed shape but a fixed volume. • Gas – a state of matter with no fixed shape and no fixed volume. • Volume – the amount of space a solid, liquid or a gas takes up. • States of Matter – the different forms that 	<ul style="list-style-type: none"> • Appliances – electrical devices used for a particular purpose, e.g. fridge, oven. • Plug – a device put into a socket to connect to an electrical circuit. • Socket – the part of the electrical circuit where the plug fits to make a connection. • Cell – a portable store of energy. • Electrocuted – to be injured or killed by electricity.

	<ul style="list-style-type: none"> • Spider – an invertebrate that has two body sections and eight legs. • Soft-bodied invertebrate – an invertebrate with a soft body such as a slug or a snail. • Mammal – an animal with a spine, fur or hair on its body, and feeds its young on milk • Bird – an animal with a spine, feathers, wings and a beak. • Fish – an animal with a spine, fins and gills, that lives in water. • Amphibian – an animal with a spine 	<ul style="list-style-type: none"> • Incisors – flat teeth at the front of the mouth that are used to bite into food. • Canines – sharp, pointed teeth that help with ripping and tearing. • Premolars – the teeth found between canine teeth and molars that guide food to the back of the mouth. • Molars – the large teeth at the very back of the mouth used to grind and chew food. • Enamel – the protective layer of a tooth. 		<ul style="list-style-type: none"> • Pitch – how high or low a sound is. • Ear canal – the tube that runs from the outer ear to the ear drum ear. • Ear bones – tiny bones that transfer vibrations from the ear drum to the inner ear. • Ear drum – a thin layer that can vibrate. • Cochlea – a spiral-shaped tube in the inner ear. • Decibel (dB) – a measure of the loudness of a sound. • Decibel meter – a piece of 	<p>materials can take.</p> <ul style="list-style-type: none"> • Pouring solid – a solid that can be poured like a liquid. • Volume – the amount of space a solid, liquid or gas takes up. • Flow – to move smoothly and continuously in one direction. • Freezing – the change of state from a liquid to a solid. • Melting – the change of state from a solid to a liquid. • Boiling – the change of state 	<ul style="list-style-type: none"> • Circuit – a closed path that energy can flow through. • Switch – a device that opens and closes an electrical circuit. • battery – two or more cells joined together to store more energy. • Buzzer – a device that makes a sound. • Conductor – a material that allows energy to flow through it. • Insulator – a material that does not allow energy to flow through it. • Metal – a material which can be hard,
--	---	---	--	---	---	--

	<p>that can live on land and in water</p> <ul style="list-style-type: none"> • Reptile – an animal with a spine and dry scales on its body. • Flowering plant – a plant that can produce flowers and fruit. • Pollination – the transfer of pollen from the male parts to the female parts. • Non-flowering plant – a plant that does not produce flowers or fruit. • Fern – a non-flowering plant with long stems and feather-like leaves. 	<ul style="list-style-type: none"> • Root – the part of a tooth that holds it in place in the jaw. • Plaque – a sticky coating made by germs that can harm the teeth and gums. • Oesophagus – the organ that pushes food from the mouth to the stomach intestines (small and large) – the organs that absorb nutrients and water from food. • Mouth – the organ that takes in food and begins digestion using teeth and saliva. • Stomach – the organ that squeezes and 		<p>equipment used to measure the loudness of sound.</p> <ul style="list-style-type: none"> • Insulate – to protect something from the transfer of heat, sound or electricity. 	<p>from a liquid to a gas, which happens quickly when heated and creates bubbles of the gas.</p> <ul style="list-style-type: none"> • Condensation – the change of state from a gas to a liquid. • Evaporation – the change of state from a liquid to a solid, which happens slowly from the surface of the liquid. • Independent variable (what will change) – the temperature of the different locations. • Dependent variable (what will be measured) – the time it takes for 	<p>shiny and a conductor of electricity.</p> <ul style="list-style-type: none"> • Material – what an object is made from. • Electricity – energy that flows in wires. • Mains electricity – energy flowing to homes, businesses and schools through wires. • Battery-powered – a device that needs cells to work. • Renewable energy – energy sources that do not run out such as wind and solar (Sun) energy. • Non-renewable energy – energy sources that can run out.
--	--	--	--	--	--	--

	<ul style="list-style-type: none"> • Moss – a non-flowering plant that grows in damp, moist conditions. • Flowering plant – a plant that can produce flowers and fruit. • Non-flowering plant – a plant that does not produce flowers and fruit. • Stamen – the male parts of a flowering plant. • Pistil – the female part of a flowering plant. 	<p>breaks down food.</p> <ul style="list-style-type: none"> • Rectum – part of the large intestine where waste exits the body. • Saliva – clear liquid in the mouth that softens food. 			<p>the water to evaporate.</p> <ul style="list-style-type: none"> • Controlled variables (what is kept the same) – the volume of water in the containers, the size of the containers, the initial temperature of the water in all the containers.
